

Date: December 3, 2024
To: All Potential Offerors
From: Michelle Hahn, Purchasing Analyst
Subject: RFI 20252027 License Plate Recognition Systems

ADDENDUM NO. 1

The solicitation referenced above is amended as follows.

Answer questions from potential Offerors:

1. On page 2, Notice to Suppliers, the RFI states, "Letters of Interest, including high-level price range information for License Plate Recognition Systems will be accepted by the Purchasing Office until Wednesday, December 11, 2024 @ 2:30 PM". In order to provide the Department a budgetary pricing range, please provide details on the approximate number of cameras the Department anticipates it will need.
The number of cameras would be approximately 40-50, depending on price.
2. On page 4, Key Requirements, the RFI states, "The reporting tool should...customize reports based on timeframes, *geographic zones*, and other relevant criteria". Has the Department identified the areas LPRs will be implemented? Are these residential areas (i.e., lower speed zones) or higher speed areas (e.g., highways)? Can the city provide the lane coverage and speeds needed for capture at these locations?
Non-residential areas. Lane coverages varied depending on placement, but could be up to 4 lane coverage. Speeds vary based on placements near highways etc. 25-35mph in town and up to 55mph on Beltline or major thoroughfares.
3. Will suppliers have the ability to leverage existing infrastructure, including hardwired electrical, for the cameras?
It is unknown at this time.

All other specifications, terms and conditions remain unchanged.
